### **ACTIVATED CARBON TYPE 220R 8 x 30 COAL/COCONUT BASED CARBON**

**Type 220R** is a reactivated carbon product. It is manufactured from spent activated carbon by high-temperature steam activation under rigidly controlled conditions. High-temperature activation removes all absorbed species and restores carbon activity to near virgin levels. The carbon is a versatile and economic choice for a range of liquid phase purification applications, including water treatment and industrial processes.

#### **STANDARD SPECIFICATION**

Iodine Number, ASTM D-4607	800 Minimum
Moisture Content, ASTM D-2867	5 % Maximum (As Packed)
Particle Size, ASTM D-2862	8x30 US Mesh 12x40 US Mesh

#### **PACKAGING**

50 LB Bags	50 LB Drums	Bulk Tanker
1,000 LB Bulk Supersacks	200 LB Drums	

#### **NOTES**

Unless otherwise specified, particle size distribution will be 10 % maximum on the top screen and 5 % maximum through the bottom screen.
